## Exercise 4

### Reading 2:

#### **Read the article about artificial intelligence and answer the questions**

AI, or artificial intelligence, is a technology that has the potential to change our lives in many ways. **Q1:** One advantage of AI is that it can help us do things faster and more efficiently.

**Q2:** For example, AI can be used to automate tasks like data entry or customer service, which can save time and money for businesses. It can also be used to analyze large amounts of data and provide insights that humans may not be able to see on their own.

**Q1:** Another advantage of AI is that it can improve safety in certain situations. For example, self-driving cars use AI to navigate the roads and avoid accidents. AI can also be used in healthcare to diagnose diseases and develop personalized treatment plans.

**Q3:** However, there are also some disadvantages to AI. One concern is that it may take away jobs from humans.

**Q4:** As AI becomes more advanced, it may be able to perform tasks that were previously done by humans, such as driving trucks or answering phones. This could lead to job loss and economic disruption.

Another concern is that AI may not always make the right decisions. AI algorithms are only as good as the data they are trained on, and **Q5:** if that data is biased or incomplete, it could lead to unfair or inaccurate results. There is also the risk of AI being used for malicious purposes, such as cyber attacks or surveillance.

**Q6:** In conclusion, AI has the potential to bring many benefits to our lives, but it also comes with risks and challenges. As we continue to develop and use AI, it will be important to consider these factors and ensure that we use this technology in a responsible and ethical way.
